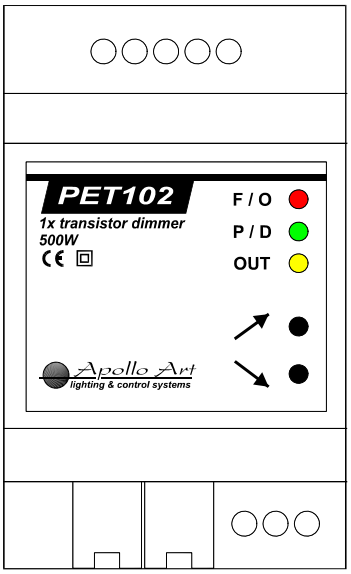
PET102

CS0244-1, CS0244-2

Introduction



PET102 is a one-channel dimmer for resistive and capacitive loads up to 2 A suitable for dimmable electronic transformers. The unit features PEbus and contact closure control. Programmable parameters (input response, min. and max. value of output voltage, dimming speed, output characteristic). Indication of output level by yellow OUT LED, max. temperature overload and over-current electronic fuse by red F/O LED. Indication of power by green P/D LED. This LED is flashing while data is being transmitted or received through the PEbus.

For detail information see manuals for **Power Express** units. All manuals are stored on Application CDs.
